Components of this control that are from human source material have been tested by FDA accepted methods and have been found to be negative/non-reactive for Hepatitis B, HIV-1, HIV-2, Hepatitis C (HCV), HTLV-1, and HTLV-2. No known methods can offer total assurance that products derived from human source material will not transmit these diseases. Therefore, products derived from human blood and patient samples should be considered potentially hazardous and handled as if capable of transmitting infectious agents.
